

Date

Dear Honorable Chair and/or member of Senate Environmental Committee.

I am a resident of Louisiana.

I am writing with regard to SB356, currently before the 2026 Louisiana State Legislature and introduced by State Senator Royce Duplessis. It is scheduled to be heard April 14 before the Senate Environmental Committee.

This very important legislation will require 117 high-risk industrial facilities (in Cancer Alley, but also throughout the state) to install state-of-the-art air monitors to measure 17 of the most toxic air pollutants around their fencelines. This data-driven approach will (1) save industry money, (2) protect Louisianans' health and (3) prevent serious accidental chemical releases.

Please support this legislation.

Thank you for your consideration.
